

JULY

1. The first step in the process of the development of a new product is the identification of a market need. This is often done through market research, which can be conducted in a variety of ways, including surveys, focus groups, and interviews. The goal is to understand what customers want and need, and to identify any gaps in the current market.

Figure 1 consists of four panels, labeled (a) through (d), showing histological sections of lung tissue. Panel (a) shows a normal lung with clear alveolar spaces and thin septa. Panel (b) shows the early stages of infection, with small, dark-staining abscesses appearing within the alveolar spaces. Panel (c) shows a more advanced stage, with larger, more numerous abscesses and some consolidation of the lung tissue. Panel (d) shows a late stage of infection, characterized by extensive abscess formation, significant tissue destruction, and a dense inflammatory cell infiltrate.

A GREAT COUNTRY.—The Rev. Bishop Pierce of the Methodist Episcopal Church, South, gives the following picture of the State of Texas:

Texas is a curious country—a paradox. Everything is in the superlative, or contradictory, or marvelous. It is the richest and poorest, and the best land and the meanest water in the hardest country to live in, and has the most to live on; the days are the hottest, and the nights the coolest; here are the most rivers, and the least waters; the best roads, and the slowest travel; the finest building material, and the poorest; the most mountains, and the most clouds, and less rain; more plains, and less timber; more ropes to tie horses, and yet more strays; a poor coun-

try for farming, and yet the most productive; the least work and the largest yield; the horses are small and the cattle big; the frogs have horns, and the rabbits have ears like man's; the people are intelligent without general education—inventive without being tricky—refined without mannerism—rich without money—hospitable without houses—bold, generous and brave. In fine, here is an empire in extent and resources, but in the slowest process of evolution, and well destined to population, wealth and power; there is much to admire, but little to deplore; many things to enchant, but few to offend; and for the people and their institutions there is a splendid future.

Prince Demidoff has presented to the Mining Academy of Vienna a piece of natural platinum weighing 30 pounds, and valued at 2880 Roubles.

from the mines of Oural, near Nizhnoe Fiedigies. This "nugget" of platina is surpassed only by that in the Cabinet of the St. Petersburg Academy, which weighs seventeen pounds and a half.

Narrow Escape of a Whole Family from Burning.

A fire broke out in the Curtis House in New Orleans on Sunday morning, May 22d, from which Mr. Curtis and his family made a narrow escape with their lives. The story says:

Mr. Curtis, his wife and two little girls were sleeping soundly when the fire broke out. So fierce and rapid was the spread of the flames, that when Mr. Curtis awoke the whole of the lower story was in a blaze. Rushing down stairs in his night clothes in the smoke, he found it was too late to save anything but the lives of his family. Rushing up stairs, he found his wife

the girls' room, got one of the girls and carried her down. Going back, the smoke and heat becoming worse each moment, rescued the other girl and bore her down. A third time he went back for his wife. The heat and smoke in the passage were now so intense that he could neither see nor hear. So he groped ahead, feeling the walls and doors, found his wife, and carried her down stairs. Just as they got to the stairs, the flames shot across the passage below. It was a critical moment, the only chance for life being to make a rush through the flames.

Mr. Curtis at once decided to do so. He felt himself the best man for the task and the want of breath he collected his energies for a final effort, made a rush through the flames, reached the bannette staggering, and fell into the street with his wife in his arms. It

was found that both were seriously injured. Mr. Curtis died and right hand being crushed and left hand burnt about the head, and injured most of the two. It was certainly a very narrow escape from a most awful death, for in a minute or two after Curtis got out with his wife, the building was one fierce roar of flame.

Milan is a very ancient city, being founded 400 years before the Christian era. It was industrial and embellished by many of the Roman Emperors, and was the birthplace of many eminent men, including a number of Popes. This city, though besieged forty times, and forty times taken, and four times destroyed, still contains a vast number of churches, convents, universities and schools, and many stately buildings, both public and private. The Cathedral, begun in 1380, is one of the finest in the world. It is also the birthplace of St. Ambrose, whom the Emperors of Germany were crowned. The city is the site of a Circular Shrine, encompassed three sides by a wall, surrounding the parts. Nearly eight miles in circumference and visited by ten, "poor": It is distant from Vienna about 400 miles.

A New Gunpowder Plot—Port Gibson, Court House, Blown Up and Destroyed—Vicksburg, July 1.—At about four o'clock this morning, some

several hundred persons, some of whom had previously been placed under the Court House, at Port Gibson, and about half the building was blown to atoms.

The Sheriff's office adjoining was also destroyed, and his vault robbed of about \$10,000.

The occupants of the building all escaped uninjured.

The damage to the building is estimated at from \$10,000 to \$12,000.

No clue has yet been discovered as to the perpetrators of this heinous act.

New Orleans Picayune.

(Correspondence of the New York Commercial Advertiser.)

LONDON, June 21, 1859.

There is nothing new from the seat of war, but the French and Piedmontese are approaching the points where Austria is resolved to make a stand, and another battle is consequently considered imminent.

Meanwhile there is increasing anxiety on the part of the public in this country, as the excitement in the other German States, Prussia finds herself almost precipitated into some direct action, and the rumor is that she has determined, in the name of the confederation, to propose certain conditions of peace, the rejection of which by the Allies will be the signal for a conjunction with Austria.

The object of this move is to compel a large concession from Austria concerning the future government of her Italian possessions, and to preserve her from the slightest surrender of territorial rights.

Of course the prospect of their acceptance is not thought to be great.

The diplomats, therefore, are without comfort, and the complications of the moment have become considerably more serious.

The fact of the Emperor Napoleon, with the view of his being made useful in stirring up the Hungarians to revolt, Mr. Mazzini has not yet been enjoyed. He is still consistent, and at a meeting just held at Glasgow, a letter was read from him in which he asserts the true friends of Italy to withhold their faith alike from Austria and France, and to be ready to step in if there should ever come an opportunity when the country could speak not through the mouths either oppressors or pretended liberators, but itself alone.

Turkey is again attracting attention. Russian gold has done its work, and the Divan are at the feet of the Grand Duke Constantine, who has just arrived at Constantinople, as the last stage of the Medicean drama. Secret treaties and quiet plots of all kinds may now be culminated upon. In Egypt, it is said, similar influences are at work. Some time ago it was remarked that the Mediterranean might be expected to prove the scene of events of more permanent importance than any that are to take place in Italy.

Incidents of the War.

A great political demonstration had taken place in Naples on the receipt of the news of the late battle of Solferino. A great demonstration was made in favor of the French. The road from the royal palace to the street called Piazza was filled with upwards of twenty thousand people. The French and Piedmontese soldiers, who were in the city, were warmly received. Many arrests were made.

Explosion Shot by His Own Soldiers.

It is said that General Espinasse met his death by a bullet fired from the ranks of his own army. The shot was fired from the ranks of the army in the morning, and the general was killed.

Storm.—There was a considerable storm of rain, hail, and wind, at this place and extending several miles, in a south-westerly direction, on Thursday evening last, and we regret to learn that considerable damage was done, by the hail and wind, in some places, to the growing crops of cotton and corn. On that and the previous day the mercury rose to 95 deg. in the shade. Since then it has risen still higher, ranging at 91 and 95, and on Tuesday last rising as high as 98.

The attention of land buyers is specially invited to the advertisement of Ebenezer Henry, in another column. There are many persons who emigrate from this country to Mississippi, Arkansas, Louisiana and Texas, in search of a better cotton country. They will hardly be able to find a better one than where this land is located; and they may rest assured that the land offered, is first class cotton land.

Our thanks are due to JAMES KEMP, Esq., Post Master, at KEMP'S CREEK, in this County, for the names of several new subscribers, forwarded at different times.

Who will send us the largest number?

We will give a premium of a five dollar gold piece, and one year's subscription to the Republican to the person sending us the largest list of responsible subscribers, provided the number is not less than 20. And \$2 50 and six months subscription, for the next largest, not less than 10; and one year's subscription for next, not less than five.

A letter from Mr. J. W. Fullender, one of the Mail Agents, on the Ala. and Tenn. R. R., dated 18th inst., informs us that a car load of iron arrived at the head the track on that day's train: that the work of laying it down had commenced, and that it would be finished to Talladega by the first of September, if the grading could be finished.

REPORTED TREATY WITH MEXICO.

A Washington dispatch to the N. Y. Courier and Enquirer, says:

It is stated upon probable authority that Mr. McLean has negotiated a treaty with Mexico, ceding to the United States, Sonora, Chihuahua and a part of Tamaulipas, the United States engaging to assist the Liberal Party and to pay the claims of American citizens within a limited amount, to be ascertained by a Mexican Commission. The treaty is expected to arrive with the present month.

THE ATLANTIC.

At 8.30 P. M., the shades of the evening shut from our view the noble city of St. Louis and the father of waters, though it continued light until after 10 P. M. Mr. La Mountain, having suffered from sickness on Thursday, and being too unwell to work hard under a burning sun at the inflation, left much hard labor for me at that work. I submitted the whole thing to his charge for the night, with the understanding that he would be waked whenever he wanted the valve worked, and he took it with alacrity. Before I went to sleep we had mounted to a height at which the balloon had become completely distended, and where we found the current due east. Here it became chilly, and Mr. La Mountain, as well as all of us suffered from the change of air and with all the climbing we could not get the still uncomfortable, although the thermometer stood at 42, and the barometer at 29, and this was the lowest of both the instruments during the whole voyage, except the crossing of Lake Ontario.

Mr. La Mountain proposed to take the lower current as long as it would take us but a few points North of the lake, and I told him that we had been told to report his reckoning in the morning. After bidding the party in the boat a good night and good speed, I coiled myself up in blankets, and laid down as best I could, and in a few moments was sound asleep, and knew of nothing but repose until 11.30 P. M.

At this time Mr. La Mountain again mounted for the upper current, being desirous of making a little more progress, but he had no success, as the balloon had become so tense, and the gas was rushing from the neck with a noise, but finding no answer from me, he suspected that I was being smothered in the gas, and he dismissed Mr. Gager to mount to my car by a rope provided for that purpose, and Mr. Gager found me in a very comfortable position, and a good slaking and the removal of the neck of the balloon from my face, with plenty of pure cold air around me, soon brought me back to a knowledge of what was going on, and I resolved to sleep no more during the night.

At midnight I felt quite well, with an invigorated spirit of observation, and I told him that we had been told to report his reckoning in the morning. After bidding the party in the boat a good night and good speed, I coiled myself up in blankets, and laid down as best I could, and in a few moments was sound asleep, and knew of nothing but repose until 11.30 P. M.

streaming with perspiration

After the first four hours of racking pain, and incessant cries for mercy, she became more composed, but remained prostrate for nearly three days in the condition which we have described. During the prostration of this woman, her house was visited by hundreds of

the neighboring people. She had never been taught to read or pray, and was unable to distinguish one letter of the alphabet from the other, yet she prayed with intense fervency, and exhorted the people to repentance with the most astonishing fluency and accuracy of speech. This case, like many others, was accompanied by visionary scenes, illusions, certainly, but of a very extraordinary character. A poor

Other things, she maintained that Bible traced its characters of light upon before her; and that, although unable to read, a spiritual power had endowed her with capacity to comprehend the meaning of every word in it. It is an undoubted fact that she repeated with literal accuracy, and as if read from the volume, a very large number of quotations from the Old and

New Testament, applying them in an appropriate manner in connection with the prayers and exhortations wherein she was incessantly engaged; but these perceptions gradually faded in her progress towards recovery, and entirely disappeared on restoration to her ordinary health.

During the following month the movement made considerable progress

at Laymore, Clinty, and the neighboring townlands; and on Sunday evening last an assemblage, numbering from fifteen hundred to two thousand people, many of them from Ballymena, congregated at a prayer in the open air, near Kileonriola. The audience arranged themselves upon the green slopes of a spacious worn out quarry pit, and the services were opened with prayer conducted by some religious people.

the locality. Three members of a lay deputation from Ahoghill then successively addressed the assemblage; and a third speaker had nearly concluded his exhortations, when a case of sudden death, an impression, with all the ordinary symptoms, occurred among the audience. The patient in this case was a young woman of the neighborhood, who had been slightly affected some evening

Within half an hour fully twenty people of the audience were laid prostrate; some of them utterly helpless and for a time unable to utter anything but moans or incoherent expressions of bodily pain and mental agony. The

excitement now became intense, and the scene that ensued baffles all power of description. The audience became separated into groups, each eagerly surrounding some particular case—the friends of the several afflicted parties appearing in a state of mind bordering upon distraction. Some members of each group were praying with or over the persons impressed; others were in the midst of religious exercises.

like manner singing psalms; women were wringing their hands in a fearful state of agitation; strong men were shedding tears, and the entire assembly appeared under an influence of the most solemnising character. We understand that, in all, 32 cases of decided impression, or "conviction," occurred upon the ground; and in each instance the parties were carried away removed on cars, or assisted to their homes.

The only clergyman present on the occasion was the Rev. Mr. Robinson of Brounshane. He took no part in

the proceedings, however, until the manifestations occurred; from that time until a very late hour he remained on the ground praying with great earnestness over some of the parties impressed, and expressing his opinion that the power of God had been mightily manifested on the occasion. Seven additional cases occurred among parties who had attended the assemblage, while on

the following three days the numbers found "stricken" in the neighborhood including 20 or 30 within the town of Bethlehem, have been estimated at fully 150. In some of the latter cases the series of the "stricken" party, when suddenly attacked, are described as really frightful; and a gentleman of unquestionable veracity assures us that, on a particular instance, they were

Prayer meetings have been held in various districts of Ballymena every evening of this week; and the local excitement in connection with the revival has been increased by the fact that some members of the Roman Catholic Church, now under the influence of the prevailing atmosphere,

the prevailing movement, have obtained the spiritual guidance of Protestant ministers. Many cases of very decided impression have occurred in the town and vicinity of Broughshane; and within the last few days similar mysterious operations have become prevalent in the neighboring district of Newrathville.

The balloon which went from St. Louis to the interior of New York had an "express mail bag." It contained, among other things, about forty letters, one of which enclosed a two-hundred-dollar draft on a New York city bank. The balloon men, met a storm, and they had to throw overboard a part of their cargo, in order to save themselves, a part of it being this express

mail bag. On the 5th inst. this bag was picked up in a lake and restored to its owners.
